Create Git Repository	Git - History	Git - Remote Update / Publish
From existing directory	Show all commits	List remotes
<code>cd <i>project_dir</i></code>	<code>git log</code>	<code>git remote -v</code>
<code>git init</code>	Short Format	Show information
<code>git add .</code>	<code>git log --pretty=short</code>	<code>git remote show <i>remote</i></code>
From other repository	Patches	Add remote
<code>git clone <i>existing_dir new_dir</i></code>	<code>git log -p</code>	<code>git remote add <i>path/url</i></code>
<code>git clone <i>git://github.com/user/repo.git</i></code>	Show file commits	Fetch changes
<code>git clone <i>https://github.com/user/repo.git</i></code>	<code>git log <i>file</i></code>	<code>git fetch <i>remote</i></code>
	Show directory commits	Fetch + merge
Git - Local Changes	<code>git log <i>dir/</i></code>	<code>git pull <i>remote branch</i></code>
Changed in working directory	Stats	Publish local to remote
<code>git status</code>	<code>git log --stat</code>	<code>git push <i>remote branch</i></code>
Tracked file changes	Who changed file	Delete remote branch
<code>git diff</code>	<code>git blame <i>file</i></code>	<code>git push <i>remote :branch</i></code>
Add changed files		Publish tags
<code>git add <i>file1 file2 file3</i></code>	Git - Merge/Rebase	<code>git push --tags</code>
Remove file	Merge branch into current	Git - Branching/Tagging
<code>git rm <i>file</i></code>	<code>git merge <i>branch</i></code>	List branches
<code>git rm <i>dir/ -r</i></code>	Rebase into branch	<code>git branch</code>
<i>(recursive under directory)</i>	<code>git rebase <i>branch</i></code>	Switch to branch
See files ready for commit	<code>git rebase <i>master branch</i></code>	<code>git checkout <i>branch</i></code>
<code>git diff --cached</code>	Abort rebase	Create new branch
Commit changes	<code>git rebase --abort</code>	<code>git branch <i>new</i></code>
<code>git commit</code>	Merge tool to solve conflicts	Create branch from existing
<code>git commit -m "My message"</code>	<code>git mergetool</code>	<code>git branch <i>new existing</i></code>
<code>git commit -a -m "My Message"</code>	Conflicts against base file	Delete branch
<i>(tracked files only, auto add)</i>	<code>git diff --base <i>file</i></code>	<code>git branch -d <i>branch</i></code>
Change last commit	Diff other users changes	Tag current commit
<code>git commit --amend</code>	<code>git diff --theirs <i>file</i></code>	<code>git tag <i>tag-name</i></code>
Revert changes to file	Diff your changes	
<code>git checkout -- <i>file</i></code>	<code>git diff --ours <i>file</i></code>	
Revert changes (new commit)	After resolving conflicts	
<code>git revert HEAD</code>	<code>git rebase --continue</code>	
Return to last committed state		
<code>git reset --hard HEAD</code>
